Successes and Good Ideas

South Camden Community School & East Ham Campus

Artel Scaffolding is implementing the **SafeTime®** system for scaffold inspections at these two projects.

The device which is fixed to the scaffold structure displays the load class of the scaffold and the number of days until the next inspection.

Once the device has run over the seven days since the last inspection a LED will flash alerting the user immediately.

Alongside this an email will have already been sent to the relevant parties to inform them that the inspections are due and reminder emails will continue to be sent until the scaffold has been inspected.

Rather than repeatedly filling in the same old tagging system on site and then inputting the same data on a register back at the office, they have created a system where it is all done at the same time. In fact there's no reason to even go back to the office at all as all of the data is synced and stored in the cloud by the **SafeTime®** application.
